THEMES

The main topic is closely connected with growing problems concerning artistic phenomena recognition, in terms of its geo-cultural "identity" on one hand, and art. language internationalisation on another. We suggest investigating general problems in three thematic sub-groups:

- I. EUROPES. It is the right place to take up the issues of multiplicity of notions hidden in one name, what causes in fact notional pluralism concerning "the Old Continent". We are eager to see here presentations taking up both the question of ""Europeity" of art. (or its artistic roots) and problems of minor areas co-creating this "Europeity", and finally chances for elaborating the notion of Europeity in the light of art. and culture globalisation in the end of XX century.
- II. MIGRATIONS. This subject concerns greater then ever mobility of both artists and ideas with simultaneous axiological pluralizm, in other words - equivalence in multiplicity. This is an interesting field for reflections in terms of both strategy and declared values, or of finding values in axiological chaos.
- III. FANATISM AGGRESSION TABOO. The process of values globalisation and culture homogenisation, and declaring greater and greater tolerance concerning all "minorities" causes its opposition in form of extremistic religious or nationalistic movements. The question concerning the process of auto-creation of "taboo" in the end of XX century, its essence, sources and consequences, concerns vast areas of social life in many countries. The way art. points out existence of these phenomena, taming, subordinating and absorbing them, is very interestina.
